

Module Completion & Exam Hints

Introduction to Azure Storage

- ❑ Azure Storage is Microsoft's cloud storage solution for modern data storage scenarios
- ❑ Azure Storage includes the following data services:
 - ❑ Azure Blobs – scalable object store
 - ❑ Azure Files – managed file share
 - ❑ Azure Queues – messaging store
 - ❑ Azure Tables – NoSQL structured data

Storage Account

Azure Blob Storage

Azure Blobs Overview – Unstructured Data

- ❑ Azure Blob storage is Microsoft's object storage solution for the cloud, optimized to store massive amounts of unstructured data (text or binary data)
- ❑ Azure Blob storage supports Azure Data Lake Storage Gen2; Azure big data analytics capabilities, stores both structured and unstructured data

Blob Storage

Data Lake Storage

Azure Blob Storage Lifecycle & Access Tiers

- ❑ Azure storage offers three access tiers:
 - ❑ Hot – frequently accessed data
 - ❑ Cool – infrequently accessed data (stored min. 30 days)
 - ❑ Archive – rarely accessed data (stored min. 180 days)
- ❑ Storage Lifecycle Policy :
 - ❑ HOT → COOL → ARCHIVE

Blob Storage
Lifecycle

Azure Storage Encryption

- ❑ Azure Storage automatically encrypts your data in Azure Cloud
- ❑ Encryption is done using:
 - ❑ Microsoft-managed encryption keys (Azure Storage Service Encryption-SSE)
 - ❑ Customer encryption keys (client-side encryption)

Storage
Encryption

Azure Storage Replication

- ❑ Microsoft Azure always replicates data in your storage account to ensure durability and high availability
- ❑ Storage Replication options:
 - ❑ Locally Redundant Storage (LRS) – 3 copies, same DC
 - ❑ Zone-RS (ZRS) – 3 copies in 3 AZs
 - ❑ Geo-RS (GRS) – data in 2nd DC
 - ❑ RA-GRS – RA to data in 2nd DC
 - ❑ Geo-Zone-RS (GZRS) – 2 regions, 1st 3AZs
 - ❑ RA-GZRS – RA to data in 2nd DC

Azure Managed Disks

Azure Disk Roles

- ☐ In Azure, there are currently three main disk roles:
 - ☐ OS disk (Windows, Linux)
 - ☐ Temporary disk
 - ☐ Data disk
- ☐ OS disk – pre-installed OS
- ☐ Temporary disk – short-term storage
 - ☐ Data persists normal VM reboot
 - ☐ Power off – data is lost
- ☐ Data disk – Persistent data

Training Bootcamp

Azure Files Storage

Azure Files – File share in Azure Cloud

- ❑ Azure Files offers fully managed file shares in the cloud that are accessible via SMB protocol
- ❑ Azure Files shares can be mounted (attached) by both on-premises and cloud machines
- ❑ Applications can mount a file storage share to access file data, just as a desktop application would mount a typical SMB share

Azure Files

Azure Queues Storage

Azure Queues Overview – Messaging Store

- ❑ Azure Queues Storage is a service for storing large numbers of messages; enables reliable messaging between application components

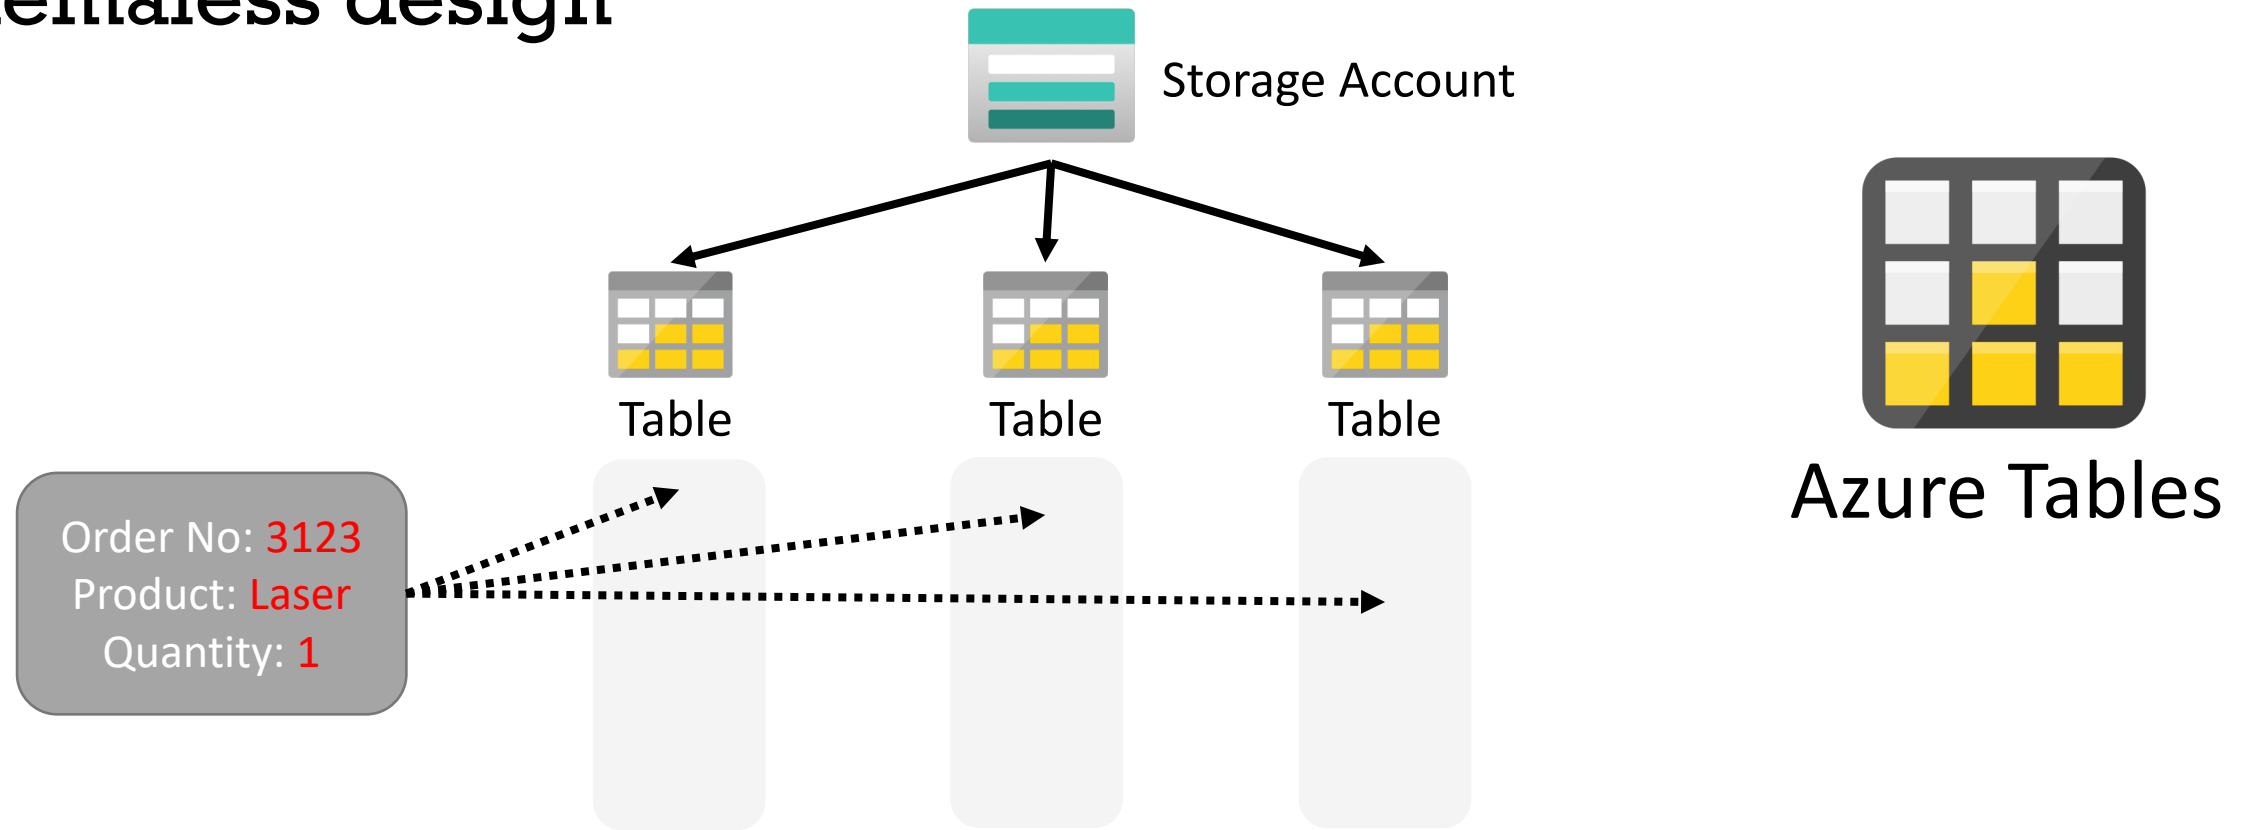

Azure Queues

Azure Tables Storage

Azure Tables – NoSQL Structured Data

- ❑ Highly scalable Azure NoSQL database, storing structured NoSQL data, providing a key/attribute store with a schemaless design

Azure Tables Storage Overview

- ❑ Storage account
 - ❑ Multi-purpose storage service
 - ❑ Process up to 20.000 rows/s
- ❑ Table
 - ❑ Collection of rows (entity)
 - ❑ Process up to 2000 rows/s
- ❑ Entity – collection of properties (columns and values)
